

# RECKITT BENCKISER

— PROFESSIONAL —

## 4-Product System Dispenser

### Simplicity

- Automatically mixes and dispenses to fill trigger spray bottles, mop buckets or autoscrubbers at the push of a button.
- Visible color-coordinated labeling makes it easy to identify products, thus facilitating training.
- Product changeovers are simple since no special or complicated packaging is required.
- Dispensing spout reduces foaming.

### Versatility

- Adaptable dilution rates let you take advantage of our full line of concentrated cleaners, disinfectants and deodorizers.
- Extracts concentrate from standard Reckitt Benckiser Professional's packaging, thus eliminating the need for special packaging and additional SKUs.
- Dispenses diluted product at either 1 gallon per minute (GPM) for spray bottles or 4 GPM for mop buckets and autoscrubbers (far right button pre-set for 4 GPM flow rate).
- The single button option is ideal for satellite locations.
- Connect any combination of units together to meet your facility's requirements.
- Dilutes four different products.

### Reliability

- Threaded precise metering tips have been designed to provide accurate dilutions.
- Unit helps ensure that fresh dilutions are prepared daily.
- Controlled and correct dilutions ensure optimal product performance every time.

## **Durability**

- Sturdy, heavy-duty stainless steel and wire rack design.

## **Control**

- Locking wire rack prevents tampering and pilfering.

## **Safety**

- Flex-Gap™ backflow preventer meets plumbing codes by protecting the water system against possible backflow.
- Drip tray helps prevent spill accidents during spray bottle filling while the drain line eliminates the worry of drip tray overfills.
- Locking wire rack for 1 gallon concentrate containers prevents tampering and misuse.
- Color-coordinated labeling and product label identification reduce product confusion and guesswork.

## **Flexibility**

- Dispensing unit has multiple dilution rates. Simply select the appropriate color-coded metering tip from the metering tip guide to meet your dilution requirements.
- Modular unit design allows multiple units to be joined together in any combination.
- Set the desired discharge rate (1 GPM or 4 GPM) for each pouring spout to fill spray bottles, mop buckets or autoscrubbers.
- Extract concentrate from any combination of 1 gallon bottles to 5 gallon pails.

## **Economy**

- Concentrate offers lower in-use cost than ready-to-use products.
- Controlled dilutions eliminate the product waste that results from glug-glug mixing.
- Color-coordinated labeling and product label identification reduce error and training time.
