Prevention of infections is a major part of providing quality care in health care settings.

✔ 2 million patients in the U.S. acquire infections while being hospitalized for other conditions, resulting in 88,000 deaths and an expense of $4.6 billion per year. Similar infections occur in other types of health care settings.

✔ Instituting an infection control program designed to prevent the spread of disease is important to reducing the risk of disease transmission.

✔ The CDC and the FDA recognize the health benefits achieved through proper environmental disinfection.

The Professional LYSOL® Brand Health Care Facility Infection Control Program offers:

✔ Trusted brand name products for cleaning and disinfection

✔ In-use clinical research supporting illness reduction, with a measured decrease in upper respiratory infections among residents in long-term care facilities.

✔ Confidence to potential new patients.

✔ Technical support

✔ Microbiological control manual

✔ Dispensing equipment including installation and service.

---

3. Study design: 8 private long-term care facilities, including 4 test sites with 443 beds and 4 control groups with 447 beds. The infection control program included educational initiatives with increased emphasis on hand washing and the replacement of all germicidal products with select LYSOL® I.C.™ Brand and Professional LYSOL® Brand cleaners and disinfectants.

4. Results obtained from telephone interviews conducted with 302 consumers from areas throughout the country. These percentages were achieved after consumers were informed about the Professional LYSOL® Brand Health Care Infection Control Program by the study interviewers.

5. Certain requirements apply. Ask your Reckitt Benckiser Professional sales representative for details.
**Patient Rooms**
